

# WEBSITE INTEGRATION

Do you need to extend the reach of your ERP information across your company, customers and partners, regardless of their location or workstation environment? By using our custom web integration solutions, we bring your select data to your employees' finger tips, and provide your customers and vendors a single point of service to promote knowledge sharing, for a fraction of the cost in ERP customization, ease of use for the average internet user, without the training cost involved in deploying ERP specific portal.

## Solution

Oracular provides custom build website integration solution build on .Net, Java or PHP technologies to perfectly match your company needs. Your objectives may combine:

- Web Portal for information sharing and collaboration
- Online shopping cart to extend your sales channel
- Web Services (SOA) integration to connect to shipping and banking third party providers

Our seamless integration with your existing ERP provide an extended life to your investment, allow for complex workflow and access rights, and gives you back the control of your data, with ease of use and modification.

## Benefits

1. Extend the reach of your ERP.
2. Collect additional information beyond your ERP configuration.
3. Manage workflow beyond the limitation of your ERP.
4. Provide a separate environment from your ERP, removing risks without overloading your ERP.
5. Provide your employees, customers and partners with a internet standard web interface - minimizing training cost and support calls.
6. Implement advanced reporting capabilities.
7. Decrease the cost of operation overall.

Oracular provides a 5-day assessment with the following objective to better your business:

1. Assess and understand your business needs
2. Understand your environment and refine your requirements
3. Assess your audience and the resulting requirements
4. Assess primary and secondary goals and establish critical path to your objectives
5. Present possible solutions in line with requirements and objectives
6. Provide a project plan with implementation estimates and milestones
7. Forecast the operating costs and estimate ROI
